### 6.5 Volume Relationships

**Goal(s)** - To investigate the relationship between the volume of a prism and a pyramid and a cylinder and a cone, making connections to their respective formulas

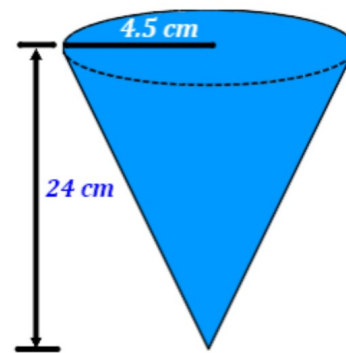

Jun 19-8:29 AM

I like popcorn. At the local movie theatre I have four differently shaped containers of popcorn to choose from. Which of the containers pictured below should I choose? Show your reasoning.

$$\begin{aligned} \text{Vol} &= L \times w \times h \\ \text{Vol} &= 8 \times 8 \times 24 \\ \text{Vol} &= 1536 \text{ cm}^3 \end{aligned}$$

$$\begin{aligned} \text{Vol} &= \frac{1}{3} \pi r^2 h \\ \text{Vol} &= \frac{(\pi)(4.5)^2(24)}{3} \\ \text{Vol} &= 508.94 \text{ cm}^3 \end{aligned}$$

$$\begin{aligned} \text{Vol} &= \pi r^2 h \\ \text{Vol} &= \pi (4.5)^2 (24) \\ \text{Vol} &= 1526.8 \text{ cm}^3 \end{aligned}$$

$$\begin{aligned} \text{Vol} &= \frac{1}{3} (\text{Base area})(h) \\ \text{Vol} &= \frac{(8 \times 8)(24)}{3} \\ \text{Vol} &= 512 \text{ cm}^3 \end{aligned}$$

What do you know notice about the volumes? Is there any connection between shapes, volumes, and formulas used?

$$V = 1536 \text{ cm}^3$$

$$V = b^2 \times h$$

$$V = 512 \text{ cm}^3$$

$$V = \frac{b^2 \times h}{3}$$

$$V = 1527 \text{ cm}^3$$

$$V = \pi r^2 \times h$$

$$V = 509 \text{ cm}^3$$

$$V = \frac{\pi r^2 \times h}{3}$$

If a **prism** and a **pyramid** have the **same base** and the **same height**, the **volume of the pyramid is 1/3 the volume of the prism**.

If a **cylinder** and a **cone** have the **same base** and the **same height**, the **volume of the cone will be 1/3 the volume of the cylinder**.
